

HARI ACHARYA

Chicago, IL | acharyaharry95@gmail.com | 303-960-2303 | linkedin.com/in/acharya-hari | github.com/HarryAcharya | harryacharya.github.io

Professional Summary

Business Analyst with 2 years across AI/SaaS, telecom, and security, built on 7 years of store operations and P&L leadership. Skilled in requirements elicitation, user stories, acceptance criteria, UAT, and traceability in Agile delivery, plus SQL, Power BI, and Python. Known for auditing my own work: publicly corrected a target-leakage flaw in my own model rather than ship a number I could not defend.

Education

M.S. Data Analytics, North Carolina Agricultural and Technical State University | GPA 3.92/4.00

Expected Dec 2026

Bachelor of Business Administration (BBA), Tribhuvan University

Technical Skills

Business Analysis: Requirements Elicitation, BRD/FRD, User Stories, Acceptance Criteria, Use Cases, UAT & Test Case Design, Requirements Traceability Matrix (RTM), Gap Analysis, Process Mapping, Current/Future-State Analysis, Stakeholder Management, SDLC
Agile & Tools: Scrum, Kanban, Sprint Planning, Backlog Refinement, Change Management, Jira, Confluence, Visio, Miro, Figma
Data & BI: SQL, Python (pandas, scikit-learn), Power BI, Tableau, Excel (Power Query, Pivot Tables), R, Data Quality Auditing

Professional Experience

Agile Business Analyst, Maya Partners (Client: RefineAI)

Mar 2026 – Aug 2026

- Owned the BA workstream for an AI resume-parsing platform, turning product strategy into buildable specs for a 12-person team.
- Authored 50+ INVEST user stories and acceptance criteria for an NLP parsing engine, partnering with data science to align model outputs with stakeholder needs.
- Redesigned requirements intake with structured acceptance criteria, reducing returned and reopened stories.
- Facilitated sprint planning, stand-ups, and retrospectives; designed UAT test cases and maintained traceability in Jira and Confluence.

Business Analyst, Charter Communications

Aug 2023 – Jun 2024

- Analyzed 100K+ customer records in SQL/Excel, finding acquisition patterns that informed Xumo Box trial and promotional strategy.
- Built executive Power BI KPI dashboards adopted as the standing weekly sales review for leadership.
- Conducted market research with 1,000+ users to inform positioning; authored BRDs and process flows that reduced cross-team ambiguity.

Analyst Intern, ADT Security Services

Jan 2023 – Jul 2023

- Built monthly sales forecasting models in SQL and Excel for pipeline planning and territory-level resource allocation.
- Automated recurring sales and pipeline reports previously assembled by hand, recovering analyst capacity for higher-value work.

Projects

Auto Claims Transformation: Consulting-Style BA Case Study

Python, BRD, KPI Framework

- Analyzed a manual, multi-handoff P&C auto claims process, producing a current-state map, root cause analysis, and a BRD with 9 business and 13 functional requirements traced to root causes.
- Designed a three-path future state phased from quick wins to straight-through processing, with a Python KPI baseline on labeled synthetic data; every KPI states its formula, source data, and when it would not be reported.

Student Loan Repayment Risk: Target-Leakage Post-Mortem

Python, scikit-learn, Model Card

- Traced a perfect 1.0 ROC-AUC to my own target leakage (one column carried 84% of feature importance); rebuilt with a regex-enforced column ban and an `assert_no_leakage()` guard for an honest 0.946 across 4,756 institutions.
- Built a three-tier triage that captures 73% of high-risk institutions in the top 23% of the book (3.2x lift); retracted my own for-profit finding when it failed multivariate control and published the post-mortem as a merged PR and model card.

Federal Spending Anomaly Detection: NASA Contract Risk Ranking

Python, PostgreSQL, Power BI

- Authored the full BA package (charter, BRD, 8 user stories, RTM, 6 UAT test cases) and converted 6 threshold rules into a 0–12 risk score across 16,866 awards, flagging 2,687 (16%) and cutting manual review scope by roughly 84%.

More projects on GitHub: insurance loss analysis, member churn modeling, Medicare Part D analytics, hospital readmissions prediction

Additional Experience

CTS Student Technician, NC A&T Information Technology Services

Aug 2025 – Dec 2025

- Delivered Tier 1/2 IT support under formal change control and maintained privileged-access records for audit readiness.

Store Manager, United Pacific

Jan 2016 – Dec 2022

- Managed a 15-person multi-shift team with full P&L ownership; led a zero-downtime CRM migration, an inventory workflow redesign, and vendor negotiations.

Certifications

ICAgile Certified Professional – Agile Product Ownership (ICP-APO) | IBM Business Analyst Professional Certificate | Google Business Intelligence Certificate | SAS Statistical Business Analyst | CBAP® Exam Preparation Specialization (IIBA EEP)
